

AcouPlexTM ReFract

Shaped Platform

- A multifunctional product made from a totally new composite material – exclusive to MusicWorks - developed from the ground up to deliver superior isolation
- Designed to mesh with the CH Precision 1 series of products
- Also use as an isolation table for other components

Turning the tables on all you thought you knew about system isolation.

As we learn more about the storage, and absorption of destructive vibrational energy, the clearer it is that the existing models for dealing with it are inadequate. Mechanical energy becomes electrical noise. Deal with it.

The MusicWorks AcouPlex ReFract is based on the form used originally in the ReFlex block, adapted for use on CH Precision high performance electronics, The model 1 keys into CH Precision 1 Series . But the fact is that this product works equally well on other high performance electronics.

Using a ReFract as a stand alone isolation table for smaller components, and mains distribution blocks results in profound advances in the reduction of noise .
